## LIGHTBALL

Pendant and wall luminaires

Series of indoor luminaires for suspended or wall mounted installation, with spherical diffuser in frosted glass (for halogen versions) or transparent glass and housing in chrome-plated technopolymer. The series uses halogen and LED light sources, with the possibility of adjusting and programming the colour of the light emission (RGB). Lightball is perfect for scenographic lighting in areas such as restaurants, pubs, and other public places in addition to showrooms, exposition areas and particular residential applications.
