PRO INTERIOR

Wall recessed luminaires

A series of wall recessed luminaires for hollow walls, with cover in anti-corrosion aluminium, glass diffuser and galvanized steel body of a depth of only 82 mm.

The Visa model comes in two sizes, and has a visor to direct the light beam. The Tech model comes in three sizes and its particularly shaped diffuser protects the light bulb and electrical parts of the fixture against any uncontrolled access; it is therefore very sturdy, safe, and easy to clean and maintain. The Plat model comes in two sizes, with adhesive signage pictograms.

The Prointerior series is indicated for public or private indoor areas where decorative signage is required and unobtrusive light fixtures are desirable.

PRO INTERIOR VISA

Wall recessed luminaires for halogen and fluorescent lamps

Recessed mount luminaire for interior use in partition-plasterboard walls. Sheet-zinc recessed housing (82 mm depth). Satin glass diffuser. Die-cast non corroding aluminium screen painted in white or metal grey finish. Polymer gasket. Stainless steel locking screws. Hangers for mounting to partition-plasterboard walls. All luminaires can be installed either upwards or downwards. Class I, IP40.

Minimum depth for installation in partition-plasterboard walls.
